

## Power Innovations Formalizes Agreement with MTI

**MTI to integrate Power Innovation's Managed Backup Power  
Option for its Vivant Systems.**

LINDON, UTAH, April 27, 2002 - [Power Innovations International, Inc.](#) announced today agreement with [MTI](#), to provide Power Innovations' Uninterruptible Power Quality (UPQ™) products for use with MTI's Vivant® fault tolerant and high availability [SAN](#) and [NAS](#) solutions. Products shipping after June 1, 2002 will have the option of managed power backup systems integrated into the Vivant product line and other MTI products.

Power Innovations' [UPQ products](#) are used extensively to provide clean power and backup power for electronic equipment and computer systems. MTI's Vivant systems will now have battery backup and remote power and environmental management tools as part of a hosted enterprise management service that empowers a company's IT staff to proactively monitor, predict, and prevent incidents related to power and environmental conditions that may affect the availability of its most complex mission-critical systems from a Web-based, unified management console.

The agreement allows MTI to offer Cabinets for its Vivant products that will have Power Innovations UQP Products preinstalled. MTI will also utilize Power Innovations SNMP enabled devices in providing a environmental and security management support services option for its customers.

"With the combination of these products, IT executives can rely on MTI's high availability Vivant storage independent of their electrical power environment," says Bob Mount, President of Power Innovations. "Their focus can turn to managing their companies without the need to worry about difficulties caused by power or other environmental incidents". UPQ systems provide clean power and management tools which are now integrated with MTI's award-winning storage solutions.

"We have now extended the reliability of our systems beyond the current industry standards. Our product reliability and management tools now have an option for dealing with the increasingly unpredictable environments of data centers and especially remote sites," says Thomas P. Raimondi, chief executive officer of MTI.

UPQ systems utilize true online power conversion with filtering, regulation and utility isolation to provide perfect sine-wave power to the customer equipment. The battery backup is scalable from a few minutes to hours of backup. Other tools allow MTI users to gracefully shut down and restart their systems remotely or automatically when power failures take the system offline.

## **About MTI Technology Corp.**

MTI's mission is to provide Continuous Access to Online Information on a worldwide basis through fault-tolerant, cross-platform data storage solutions for the enterprise. A premier provider of enterprise storage solutions for more than 20 years, MTI develops and manufactures high-performance, high-availability storage solutions designed for mid-range to Global 2000 companies, worldwide. Headquartered in Anaheim, Calif., the company offers services and support in the U.S. and Europe and complies with ISO 9002 quality system standards.
