Power Innovations is Awarded Contract to Supply the Tooele Army Depot with Critical, Clean Power

LINDON, Utah, June 2, 2009 – Power Innovations was recently awarded a contract to supply the Tooele Army Depot with an Uninterruptible Power Quality™ (UPQ™) Q-LS 50 kVA system.

The facility processes important information, such as inventory, personnel records, and email. The Q-LS 50 kVA system filters and isolates the power, as well as provides 81 minutes of backup power for the depot's central computer facility. The UPS system that was replaced took up four times the space of the newly installed UPQ system.

“The Army Depot's decision to go with UPQ was an excellent choice for protecting their data and operations. When working with them I was impressed with their knowledge of power systems, as well as their thoroughness in ensuring that our product would meet their needs,” says Karen Gudmundson, VP of Business Development.

Serving as a storage site for war reserves and training ammunitions, the Tooele Army Depot stores, issues, receives, renovates, modifies, maintains, and demilitarizes conventional munitions. Power Innovations' Q-LS system ensures that the information that is processed daily is never interrupted by power problems.

About Power Innovations:

Launched in 1997, Power Innovations is providing quality power and management to forward-thinking companies and organizations for critical applications worldwide. Current markets include, but are not limited to, oilfield exploration, homeland security, airport security, flight simulation, and medical.
