

Power Innovations Participating With FlightSafety At I/ITSEC Conference

12/6/2004

Conference marks first time FlightSafety has asked a provider to participate

LINDON, UT - Power Innovations International, Inc., a leading developer of next generation solutions that manage, store and generate perfect quality AC power, today announced it is participating with FlightSafety International at the Interservice/Industry Training, Simulation and Education Conference (I/ITSEC) in Orlando, Fla. from December 6-9.

This year marks the first time FlightSafety has invited one of its providers to participate jointly with it at I/ITSEC. The conference promotes cooperation among various industries and government agencies in pursuit of improved training and education programs, identification of common training issues and development of multi-service programs.

Specializing in aviation services training, FlightSafety uses Power Innovations' Uninterruptible Power Quality (UPQ) solutions to power its Boeing C-17 aircraft simulators. These simulators require the filtered, perfect power and backup provided by UPQ systems in order to guard against costly damage to their sensitive equipment, which can be caused by harmonics, power spikes and other problems associated with poor power quality.

"We're honored to be a valued partner of FlightSafety, and to be asked to join I/ITSEC in the FlightSafety booth," said Robert Mount, president of Power Innovations. "We're also pleased that Power Innovations' products have been such a perfect fit and performed so well for FlightSafety. We're glad to have the opportunity to rub shoulders with others in the simulator and training industries who might also find our UPQ systems useful and cost-effective for their power needs."

In addition to their efforts on the C-17 simulators, the two companies are also working together on other projects, some of which are being demonstrated in the FlightSafety booth.

About Power Innovations International, Inc.

A privately held company in Lindon, Utah, Power Innovations International, Inc. (www.power-innovations.com) is a leading technology developer of next generation power management, power generation and power storage solutions. Through its Uninterruptible Power Quality (UPQ) technologies, Power Innovations takes inadequate and unstable power and supplies perfect quality power to connected equipment while still providing backup protection in the event of power failure. Power Innovations' systems play key roles in protecting valuable equipment, data and operations for airport and homeland security, medical facilities and equipment, aviation and government.

About FlightSafety International

FlightSafety International is the world's largest provider of aviation services, training more than 65,000 pilots annually at 42 learning centers across the United States, Canada, France and the United Kingdom. Founded in 1951, FlightSafety is dedicated to the principle that aviation safety is best achieved through training.
