Power Innovations Achieves 100% On Time Delivery

LINDON, Utah, July 16, 2007 -- For five months straight, Power Innovations has achieved 100% on time delivery of its Uninterruptible Power Quality™ (UPQ™) systems.

“We are thrilled by these results. Our success is because of the efforts of the Operations and Production teams. These teams have pushed themselves to meet deadlines while producing quality work,” says Ed Terris, Vice President of Operations.

Not only has Power Innovations achieved 100% on time delivery, but the number of systems built in the last five months has grown six times. In January, 20 systems were shipped, compared to April, the highest month, when 121 systems were shipped. Handling the growth has required high levels of organization, as well as hiring and training employees quickly and effectively.

When the purchase order is filled out, the client sets the receiving date. The typical timeframe from placing the order to receiving the unit is 90 days; however some clients need the units sooner and time adjustments are made.

Power Innovations’ high profile clients include, but are not limited to, Baker Hughes Altas/Inteq (oil exploration), Disney (entertainment), FlightSafety (flight simulators), Canadian Coast Guard (search and rescue lifeboats), Draeger (neonatal life support), GE Infrastructure Systems- InVision (airport security), Boeing (aviation), CATSA (Canadian homeland security), Hydril (oil exploration), and Transocean (oil exploration).

About Power Innovations Int'l:

Launched in 1997, Power Innovations has pioneered a revolutionary set of solutions to generate, store, and manage AC power. Power Innovations’ long term strategy includes fully integrated power management and control, storage, and generation for total power independence. Power Innovations’ mission is to provide and manage continuous high-quality power in conjunction with, or even independent of, utility services worldwide.

Currently, Power Innovations is providing quality power and management helping forward-thinking companies accomplish this goal through a new class of technology called Uninterruptible Power Quality™ (UPQ™) systems. UPQ technology began with traditional UPS technology and moved forward to address today’s critical power quality issues, while still providing back up when power outages occur.

Power Innovations’ line of power management products is currently being marketed. The company is involved in the development of a spectrum of solutions for power storage. Currently, Power Innovations offers a variety of alternative generation options. In the near future, Power Innovations plans to introduce the PowerWell™, a revolutionary solution for green renewable energy generation.
